

Strategic Web Blueprint for Apparel & Textiles

THREADLY

Apparel & Textiles E-Commerce

Week 1 Internship Project
(Concept Design & Strategy)

1. PROJECT OVERVIEW

THREADLY is a hypothetical Indian e-commerce platform designed to offer a wide range of apparel and textiles. The platform sells women's, men's, and kids' clothing, spanning ethnic wear, western wear, sportswear, and loungewear, along with raw fabrics and home textiles. The purpose of planning this website is to establish a clear structural and strategic foundation before any technical development or user interface (UI) design begins. A well-researched blueprint ensures that the platform aligns with the actual needs of modern Indian consumers rather than relying on generic templates.

- **Main Business Objective:** To build an organized, easy-to-use, and high-converting e-commerce platform that successfully captures a share of the growing online fashion market by prioritizing user trust and reducing cart abandonment.
- **Main Customer Objective:** To provide a stress-free shopping experience where users can easily discover products, understand exactly what they are buying (fit, fabric, and quality), and check out with minimal friction.
- **Brand Positioning:** *"Better Fabric • Better Choices • A Better You"*
THREADLY positions itself as a brand that cares about quality and transparency, helping buyers make informed choices without feeling overwhelmed by an overcrowded interface.

2. PRELIMINARY MARKET RESEARCH

The Indian e-commerce market, particularly in fashion, is expanding rapidly. The India Fashion Retail Market is expected to reach USD 124.32 Billion by 2030, rising at a CAGR of 12.8%. A significant shift is the dominance of mobile-first shopping; India's broader e-commerce sector is projected to reach a value of USD 163 billion by 2026.

Despite the growth, customer expectations are shifting from mere availability to better discovery and personalization. Finding the right size and fit remains a primary barrier to online fashion purchases. Fashion and apparel returns in India run at 25-40%, the highest of any e-commerce category. Sizing uncertainty is the main culprit, as 53% of apparel returns are caused directly by size and fit issues. Furthermore, 67-73% of Indian shoppers pick sizes based on past purchases or perception rather than actual measurements. There is also a slowly growing awareness of sustainability and responsible shopping among younger demographics, pushing brands to offer eco-friendly and ethically sourced fashion choices.

Research Finding	What it means for THREADLY	Website Decision
High Mobile Usage	The desktop site cannot just be shrunk down. Buttons must be thumb-friendly.	Adopt a strict mobile-first design approach. Use bottom-sheet menus for filters.
25-40% Return Rate in Fashion	Standard "S/M/L" is not enough information for buyers.	Include detailed size charts with garment measurements and model dimensions.
67-73% Guess Their Size	Users rely on perception over reality, causing fit issues.	Build a visual fit predictor and clearly list whether an item runs small or large.
Desire for Ethical Choices	Customers want more transparency about what they are wearing.	Include close-up texture images and explicit fabric composition details on every product page.
Omnichannel Shopping Preference	Shoppers appreciate flexibility in delivery and returns.	Standardize and clearly display a hassle-free online return portal.

3. COMPETITOR RESEARCH

To understand standard practices, I observed the public-facing features of four major fashion e-commerce websites in India. Note: These are observations made from interacting with publicly accessible websites as a standard user.

- **AJIO:** Heavy focus on large visual banners and trending brand categories. The search function is robust, but the sheer volume of categories can sometimes feel cluttered on a mobile screen. Material composition is occasionally placed far down the page.
- **Myntra:** Excels in user trust features. Product pages feature excellent size guides and highly visible customer photo reviews. The checkout process is broken down into simple, manageable steps, though the homepage often feels heavily crowded with sales banners.
- **Nykaa Fashion:** Strong focus on curation and style advice. They use occasion-based filtering effectively (e.g., "Wedding Guest", "Workwear"). However, return policies can vary heavily by the individual seller, which causes user confusion.
- **Pantaloons:** Features a simpler, more traditional catalog layout. Strong emphasis on family shopping, but filters are somewhat basic compared to digital-first platforms.

Competitor	Strength	Possible limitation/opportunity	THREADLY learning
Myntra	Excellent photo reviews and fit indicators.	Homepage can be overwhelming with flash sales.	Adopt a strong review system but keep the homepage cleaner.
AJIO	Good visual hierarchy for brand discovery.	Material composition is sometimes hidden deep in text.	Bring fabric details to the top, aligning with our brand promise.
Nykaa Fashion	Great occasion-based curation.	Return policies vary by seller, causing confusion.	Standardize and clearly display return policies site-wide.
Pantaloons	Strong family-centric navigation.	Outdated filter UI on mobile screens.	Ensure mobile filtering is incredibly modern and fast.

4. STRATEGIC OPPORTUNITY

Based on the market and competitor observations, THREADLY has an opportunity to differentiate itself by reducing shopping anxiety and improving product clarity.

- **Observation:** Fabric details are often buried in long text descriptions.
Customer Problem: Users aren't sure if the item will feel cheap, be see-through, or shrink.
Proposed Solution: Highlight material composition right below the size selector.
Reason: It aligns directly with the "Better Fabric" branding and sets quality expectations early.
- **Observation:** Users struggle to find outfits for specific events.
Customer Problem: Navigating by broad categories like "Dresses" takes too long when looking for a Diwali outfit.
Proposed Solution: Implement occasion-based navigation (e.g., "Festive", "Office").
Reason: It matches the user's mental model and speeds up discovery.
- **Observation:** Many users guess their size based on past purchases from other brands.
Customer Problem: Guessing leads to incorrect sizing and high return rates.
Proposed Solution: Implement detailed size guides showing garment measurements and the height/size of the model wearing the item.
Reason: Removing the guesswork gives the user confidence to hit "Add to Cart."

5. WEBSITE OBJECTIVES AND KPIs

Practical Objectives:

- **Increase online sales:** Create a smooth, logical path from the homepage to checkout.
- **Improve product discovery:** Ensure search and filters yield accurate, fast results.
- **Reduce shopping friction:** Simplify the login and checkout steps.
- **Increase add-to-cart rate:** Ensure product pages are highly convincing with clear imagery and data.
- **Encourage repeat purchases:** Use account features like a wishlist and saved sizes.
- **Build customer trust:** Display transparent shipping policies and unedited user reviews.

Suggested KPIs:

- **Conversion Rate:** The percentage of visitors who complete a purchase.

- **Add-to-Cart Rate:** The percentage of sessions where an item is added to the cart.
- **Average Order Value (AOV):** The average amount spent per checkout.
- **Checkout Completion:** The percentage of users who start checkout and successfully finish it.
- **Search Success:** The percentage of searches that result in a click or purchase.
- **Wishlist Usage:** The frequency of users saving items for later.
- **Repeat Customer Rate:** The percentage of buyers who return for a second purchase.
- **Return Rate:** The percentage of items sent back. A lower rate indicates accurate product sizing and descriptions.
- **Product Review Rate:** The percentage of buyers who leave a review post-purchase.

6. TARGET AUDIENCE ANALYSIS

The target audience consists of Indian smartphone users aged 18–40. They are comfortable with online shopping but still harbor doubts regarding fit, fabric feel, and reliable delivery. We can divide them into four distinct groups:

- **Trend Explorer:** Younger demographic (18–25). Highly active on social media. They want stylish items quickly and prioritize visual appeal.
- **Quality Seeker:** Professionals (25–35). They care deeply about what they wear and are willing to pay a slight premium for better materials, detailed product info, and lasting durability.
- **Occasion Shopper:** Broad age range. They shop infrequently but with high intent for specific events (festivals, weddings, vacations). They need fast discovery and guaranteed delivery dates.
- **Family Shopper:** Usually parents (30–40). They buy for themselves, their spouse, children, and the home. They value convenience, consolidated shipping, and saved preferences.

7. USER PERSONAS

Persona 1:-

Ananya Sharma

 **Persona Quote**

- I want to find something stylish quickly without getting confused by hundreds of options.

 **Goals**

- Find trendy products quickly.
- Find the correct size.
- Understand product quality.
- Stay within her budget.

 **Pain Points**

- Too many products.
- Unclear sizing.
- Difficult to judge fabric.
- Return uncertainty.

 **Behaviour**

- Mobile First
- Shops 2-3/mo
- Checks reviews
- Uses UPI

 **Age** : 24 Years Old

 **Location** : Pune, Maharashtra

 **Occupation** : Software Engineer

 **Annual Income** : \$120,000

1. Shopping Behavior

Before shopping

Ananya usually:

Gets an idea of what she wants

Searches online

Checks different products

Compares price

Checks images

Checks size

Reads reviews

Purchases

What she checks before buying?

High importance:

- Price
- Size
- Product photos
- Reviews
- Material/fabric
- Fit
- Delivery date
- Return policy

Medium importance:

- Brand
- Discount
- Color options

2. Technology Behavior

Primary device

She is comfortable using mobile websites and shopping apps.

Website expectations

She expects:

- Fast loading
- Simple navigation
- Easy search
- Touch-friendly buttons
- Easy filters
- Clear product images
- Simple checkout

She doesn't want to fill out unnecessary forms.

3. Products She Is Most Likely to Buy

For THREADLY, Ananya would primarily browse:

Western Wear

- Dresses
- Tops
- Shirts
- Jeans
- Trousers
- Skirts

Casual Wear

- T-shirts
- Casual tops
- Everyday dresses

Seasonal/Trending

- Summer collections
- Winter collections
- New arrivals
- Trending styles

4. How Ananya Uses Search

Imagine she wants a black dress.

She might search:

“Black dress”

Then narrow it down:

Black Dress

Women

Dresses

Black

Price range

Size

Rating

Product

THREADLY requirement

The search system should understand terms such as:

- Black dress
- Cotton dress
- Casual dress
- Party dress
- Dress under ₹1500
- Black cotton dress

This makes product discovery easier.

5. Filters She Needs

Ananya would benefit from:

Basic filters

- Category
- Price
- Size
- Color

Advanced filters

- Material
- Brand
- Rating
- Occasion
- Pattern
- Fit
- Discount

For example:

Dresses → Black → Cotton → ₹1,000–₹2,000 → Size M → 4★+

This dramatically reduces the number of products she needs to browse.

6. Product Page Requirements

When Ananya opens a product, she should immediately see:

PRODUCT IMAGE

Product Name

Rating + Reviews

Price + Discount

Available Colors

Available Sizes

SIZE GUIDE

Fabric / Material

Fit Information

Delivery Information

Return Information

ADD TO CART

BUY NOW

Particularly important for her:

Size Guide

It should show something like:

Size	Bust	Waist	Length
S	34"	28"	38"
M	36"	30"	39"
L	38"	32"	40"

The exact measurements would depend on the actual product/brand.

❤️ 7. Features Ananya Needs

Feature	Importance
 Search	Very High
 Filters	Very High
 Size Guide	Very High
 Reviews	Very High
 Multiple Product Images	Very High
 Fabric Information	High
 Wishlist	High
 Delivery Information	High
 Easy Returns	High
 Simple Checkout	High
 Recommendations	Medium
 Order Tracking	Medium

8. Motivation

Why does Ananya shop online?

Convenience

She can shop from her phone without visiting physical stores.

Variety

She can compare many styles and brands.

Price comparison

She can easily compare prices and discounts.

Time saving

She wants to find something suitable quickly.

Inspiration

New collections and recommendations can help her discover styles.

9. What Could Make Her Leave the Website?

This is useful for your UX strategy.

Ananya may leave if:

-  Website is slow.
-  Search gives irrelevant results.
-  Filters don't work properly.
-  Product photos are poor.
-  Size information is missing.
-  Fabric information is unclear.
-  Reviews are unavailable.
-  Return policy is difficult to understand.
-  Checkout has too many steps.
-  Unexpected charges appear at checkout.

10. Key Insight

Ananya doesn't just need more products; she needs a faster way to find the right product and enough information to feel confident about buying it.

Therefore, THREADLY should prioritize:

Search + Filters + Size Guide + Fabric Information + Reviews + Simple Checkout

11. Ananya's User Journey

USER JOURNEY

Ananya's Shopping Journey

From browsing to checkout – a smooth and simple experience for finding the right style.

Ananya

24 | Software Professional
Pune

"I want to find something stylish quickly without getting confused by hundreds of options."

THREADLY

Better Fabric • Better Choices • A Better You

⚠ Possible Pain Points

- Too many products to browse
- Unclear sizing
- Difficult to judge fabric quality
- Weak filters
- Missing or fake reviews
- Complicated checkout

💡 How THREADLY Helps

- Smart search & filters
- Detailed size guide
- Fabric & material information
- Real customer reviews
- Simple checkout process
- Clear return policy

Journey Legend

- Discovery
- Browsing
- Product Details
- Cart & Checkout
- Confirmation

Persona 2: Quality Seeker

Rahul Mehta

Age	28 Years Old
Location	Bengaluru, Karnataka
Occupation	Software Engineer
Income Level	\$82,000 per year

Persona Quote

I don't mind paying a little more if I know the product is comfortable, well-made and worth the price.

Goals

- Find good-quality clothing.
- Understand the fabric.
- Find the right fit.
- Check customer reviews.
- Make an informed decision.

NEEDS FROM THREADLY

- Detailed fabric information.
- Size guide & measurements.
- Fit information.
- Customer reviews.
- Multiple product images.
- Material & fit filters.
- Clear return information.

Pain Points

- Poor fabric information.
- Misleading product photos.
- Product doesn't match expectations.
- Fake or low-quality reviews.

1. Shopping Behavior

Rahul usually doesn't buy the first product he sees.

His process is more like:

Knows what he needs

Searches for product

Filters products

Opens 2–4 products

Checks fabric

Checks fit & measurements

Reads reviews

Compares prices

Checks delivery & returns

Adds to Cart

Purchases

Example

Rahul wants a casual shirt.

He searches:

"Men's cotton casual shirt"

Then checks:

Material → Fit → Reviews → Price → Delivery → Returns

2. What Information Matters Most to Rahul?

Information	Importance
Fabric/material	★★★★★
Fit	★★★★★
Customer reviews	★★★★★
Product images	★★★★★
Size/measurements	★★★★★
Durability information	★★★★
Price	★★★★
Brand	★★★
Discount	★★
Trending style	★★

This makes Rahul different from Ananya, whose main concern was fast discovery and trendy products.

3. Products Rahul Is Likely to Buy

Everyday Clothing

- Cotton shirts
- Polo T-shirts
- Casual T-shirts
- Chinos
- Trousers
- Jeans

Work/Casual

- Formal shirts
- Smart-casual shirts
- Office trousers
- Jackets

Preferred materials

He may particularly look for:

- Cotton
- Linen
- Cotton blends
- Breathable fabrics

4. Search Behavior

Rahul is likely to use **specific search terms**.

Examples:

"100% cotton shirt"

"linen shirt men"

"regular fit cotton shirt"

"formal shirt under ₹2000"

"breathable summer shirt"

Therefore, THREADLY should support searches based on:

Product + Material + Fit + Price + Occasion

5. Filters Rahul Needs

His ideal filters would be:

Product

- Shirts
- T-shirts
- Trousers
- Jeans

Material

- Cotton
- Linen
- Polyester
- Cotton Blend

Fit

- Slim
- Regular
- Relaxed

Price

Example:

₹1,000–₹2,500

Other

- Size
- Color
- Rating
- Brand
- Occasion
- Discount

6. Product Page Requirements

For Rahul, the product page should provide detailed information.

Top section

PRODUCT IMAGES

Product Name

Rating + Number of Reviews

Price

Color

Size

SIZE GUIDE

FIT

FABRIC / MATERIAL

PRODUCT DETAILS

CARE INSTRUCTIONS

DELIVERY

RETURN POLICY

ADD TO CART

7. Fabric Information

This is **Rahul's most important requirement.**

THREADLY could show:

Fabric

100% Cotton

Feel

Soft and breathable

Fit

Regular Fit

Care

Machine wash

Suitable for

Everyday / Casual / Summer

This gives Rahul more confidence before purchasing.

★ 8. Review Requirements

Rahul will pay attention to reviews.

A useful review section could show:

Overall Rating: 4.4 ★

9. Features Rahul Needs

Feature	Importance
 Fabric information	Very High
 Size guide	Very High
 Reviews	Very High
 Fit information	Very High
 Multiple images	Very High
 Search	High
 Material filters	High
 Fit filters	High
 Easy returns	High
 Delivery information	High
 Wishlist	Medium
 Recommendations	Medium

10. Motivation

Rahul is motivated by:

Quality

He wants products that are worth purchasing.

Comfort

Fabric and fit matter to him.

Value

He wants to feel that the price matches the quality.

Trust

Detailed information and genuine reviews make him more comfortable buying online.

Convenience

Even though he researches products carefully, he still wants the process to be easy.

11. What Could Make Rahul Leave THREADLY?

Rahul may leave if:

-  Fabric isn't mentioned
-  Material description is vague
-  Size measurements aren't available
-  Product photos are insufficient
-  Reviews look unreliable
-  Fit information is missing
-  Return policy is confusing
-  Product details contradict each other
-  Delivery information is unclear

12. Key Insight

Rahul is willing to spend more when the website gives him enough information to judge the quality, fit and value of a product.

Therefore THREADLY should prioritize:

Fabric Details + Fit Information + Measurements + Reviews + Product Images + Clear Returns

17. Rahul's User Journey

USER JOURNEY

Rahul's Shopping Journey

From knowing what he needs to checkout – a smooth and detailed experience for making the right purchase.

Rahul

29 | Marketing Manager
Bengaluru

"I don't mind paying a little more if I know the product is comfortable, well-made and worth the price."

THREADLY

Better Fabric • Better Choices • A Better You

⚠ Possible Pain Points

- Unclear fabric information
- Inconsistent sizing
- Limited product photos
- Unhelpful reviews
- Hidden return conditions

💡 How THREADLY Helps

- Detailed fabric information
- Accurate size guide & measurements
- Multiple product images
- Verified customer reviews
- Clear delivery & return policy

Journey Legend

- Discovery
- Browsing
- Product Details
- Cart & Checkout
- Payment
- Confirmation

Persona 3: Occasion Shopper

Priya Kapoor

Age : 31 Years Old

Location Mumbai, Maharashtra

Occupation Marketing Manager

Major : Business Administration

Goals

- Find suitable outfits for specific occasions quickly.
- Search directly using event-related keywords.
- Discover clothing based on wedding, party, festival, or formal occasions.
- Find specific colors and styles easily.

Background

- Priya is a busy marketing manager who often needs to purchase clothing for weddings, parties, festivals, office events, and other special occasions. Because of her busy schedule, she prefers shopping online instead of visiting physical stores.

Pain Points

- Unreliable or unclear delivery dates.
- No clear occasion-based categories.
- Weak filtering for styles and events.
- Difficult to find an exact color.

Quotes

I have three weddings to attend next month and no time to go to the mall.

User Behaviors

Priya is a highly goal-oriented shopper.

Her typical behavior is:

Event → Outfit requirement → Exact search → Filters → Product → Delivery check → Purchase

What Priya Checks Before Buying

1. Delivery Timeline

Her most important question is:

“Will this arrive before my event?”

The estimated delivery date should be clearly visible on the product page.

2. Color

She may have a specific color requirement for an event.

Example:

Pink → Pastel Pink → Dark Pink → Wine

Clear color names and accurate product images are important.

3. Occasion Suitability

She wants to know whether the product works for:

- Wedding
- Reception
- Party
- Festival
- Formal Event
- Casual Event

4. Size & Fit

She checks the available sizes and size guide before ordering.

5. Return Policy

Because occasion purchases are time-sensitive, she wants to know what happens if the outfit does not work.

Website Needs

Essential Features

Occasion-Based Categories

- Wedding
- Party
- Festival
- Reception
- Office
- Casual
- Formal

Advanced Filters

- Occasion
- Color
- Size
- Price

- Style
- Category
- Material
- Rating

Delivery Pincode Checker

The product page should allow the user to enter their pincode and immediately see:

“Deliverable to your location”

along with an estimated delivery date.

Clear Delivery Date

Example:

 Delivery by 18 September

This should appear near the product price/size selection rather than being hidden deep inside the page.

Ideal Product Page for Priya

Priya's product page should show:

1. Product images
2. Product name
3. Price
4. Available colors
5. Available sizes
6. Size guide
7. Occasion tags
8. Fabric information
9. Delivery pincode checker
10. Estimated delivery date
11. Return policy
12. Customer reviews
13. Add to Cart button

Example

Product: Embroidered Pink Anarkali Dress

Occasion: Wedding • Reception • Festive

Color: Pink

Fabric: Georgette

Delivery: Enter pincode → Estimated delivery date

Return: 7-day return

This gives Priya the information she needs without making her search through multiple pages.

Priya's Typical Shopping Journey

Opens **THREADLY**

Searches “Wedding Guest Outfit”

Selects Occasion: Wedding

Applies Color: Pink

Applies Price & Size Filters

Views Product List

Opens Product

Checks Product Photos

Checks Color & Occasion

Checks Size Guide

Enters Delivery Pincode

Motivation

Priya is primarily motivated by:

- Speed
- Convenience
- Event suitability
- Reliable delivery
- Correct color
- Easy decision-making
- Trust

Discounts are useful, but she is more likely to purchase a slightly more expensive product if she is confident that it is appropriate for the event and will arrive on time.

Priority

Feature	Priority
Delivery date / pincode checker	★★★★★
Occasion-based categories	★★★★★
Color filtering	★★★★★
Search	★★★★★
Size guide	★★★★
Product images	★★★★
Return information	★★★★
Reviews	★★★★
Material information	★★★
Wishlist	★★★
Recommendations	★★★

Potential Purchase Abandonment

Priya may leave the website if:

- Delivery date is unclear.
- Product cannot be delivered before the event.
- Her required color is unavailable.
- Occasion filters are missing.
- Search results contain too many irrelevant products.
- Size information is unclear.
- Return information is difficult to find.
- Product photos don't clearly show the outfit.
- Checkout takes too long

Persona 4: Family Shopper

Background	Neha Sharma is a 38-year-old teacher from Chandigarh and the primary shopper for her family. She manages clothing and home-textile purchases and prefers a convenient one-stop online store where she can shop for everyone together.
 Goals	• Shop for the whole family in one place • Buy products from multiple categories in a single order • Save family members' sizes and addresses • Easily see total discounts and savings
Pain Point	• Losing items from the shopping cart • Re-entering sizes for different family members • Difficulty comparing men's, women's, and kids' sizes • Confusing navigation between categories
Behaviour	• Shops mainly on desktop in the evening • Uses mobile for order tracking • Usually makes a shopping list before purchasing • Compares prices, sizes, reviews, and discount

Age	38 Years Old
Location	Chandigarh, India
Occupation	Teacher
Income Level	\$82,000 per year

NEHA SHARMA

Goals

- Shop for the entire family from one website.
- Purchase products across multiple categories in a single cart.
- Save family members' sizes for faster shopping.
- Keep multiple delivery addresses saved.
- Easily see total discounts and savings before checkout.
- Avoid losing items added to the cart.
- Track orders easily from her phone.
- Quickly reorder frequently purchased products.

Pain Points

- Cart items disappearing or expiring.
- Having to repeatedly enter family members' sizes.
- Difficulty comparing sizes between men's, women's, and kids' clothing.
- Confusing navigation between clothing and home-textile categories.
- Discounts being difficult to understand.
- Checkout becoming complicated when buying many products.
- Having to enter the same address repeatedly.
- Difficulty tracking several items from one large order.

Shopping Behavior

Before shopping

- Makes a mental or written list of required items.
- Checks available discounts.
- Looks at sizes and product reviews.
- Prefers stores that offer multiple categories.

During shopping

- Opens several categories in separate browsing sessions.
- Adds products for different family members.
- Checks the cart frequently.
- Compares prices, sizes, and discounts.
- Prefers saved information rather than filling forms repeatedly.

After purchase

- Uses mobile to track delivery.
- Checks order status and estimated delivery.
- May save useful products for future purchases.
- Prefers easy returns/exchanges if sizing is incorrect.

What She Checks Before Buying

1. **Total cart price**
2. **Available discounts**
3. **Family member sizes**
4. **Product reviews**
5. **Return/exchange policy**
6. **Saved delivery address**
7. **Expected delivery date**
8. **Final price after discounts**

Device Usage

Desktop/Laptop — Primary shopping

- Evening shopping after work.
- Easier for comparing several products.
- Better for managing a large cart.
- Comfortable browsing multiple categories.

Mobile — Secondary

- Order tracking.
- Delivery notifications.
- Checking order status.
- Quick reordering.

★ Website Features She Needs

1. Cross-Category Navigation

She should be able to move easily between:

Women → Men → Kids → Ethnic → Home Textiles → Fabrics

without restarting her shopping journey.

2. Family Size Profiles

Example:

My Family

- Neha — Women's M
- Husband — Men's L
- Son — Kids 12–13Y
- Daughter — Kids 8–9Y

This eliminates repeated size selection.

3. Persistent Cart

Products should remain in the cart even if she:

- closes the website,
- changes device,
- returns several days later,
- browses another category.

4. Smart Cart Organization

Instead of showing one long list:

CLOTHING

- Husband's Kurta
- Son's T-shirt

HOME

- Cotton Bedsheet
- Pillow Covers

This makes bulk shopping easier.

5. Discount Summary

The cart should clearly show:

Subtotal: ₹4,500

Discount: -₹600

Delivery: FREE

You Save: ₹600

Total: ₹3,900

6. Saved Addresses

Allow her to save addresses such as:

- Home
- Parents' Home
- Office

7. Easy Order Tracking

A simple mobile-friendly tracking system:

Order Placed → Packed → Shipped → Out for Delivery → Delivered

8. USER JOURNEYS

Journey A: Trend Explorer buying a dress

[Awareness: Social Media Ad] → [Homepage] → [Category: Trending Now] → [Filter: Size S] → [Product Page] → [Check Photo Reviews] → [Add to Cart] → [Checkout: Guest Option] → [Payment: UPI] → [Order Confirmation]

Pain point addressed: Ananya hates creating accounts for impulse buys. THREADLY's fast guest checkout prevents her from dropping off.

Journey B: Quality Seeker buying a shirt

[Awareness: Google Search] → [Direct Landing: Product Page] → [Check Fabric Details: 100% Cotton] → [View Size Guide] → [Read Reviews: Checking for shrinkage] → [Add to Cart] → [Checkout: Log In] → [Payment: Saved Card] → [Order Confirmation]

Pain point addressed: Rahul is skeptical of online quality. Immediate access to clear fabric composition and unedited reviews builds the trust required for him to buy.

Journey C: Occasion Shopper buying ethnic wear

[Awareness: Word of Mouth] → [Homepage] → [Category: Women > Ethnic Wear > Wedding Guest] → [Sort: Newest] → [Product Page] → [Enter Pincode for Delivery Estimate] → [Add to Cart] → [Checkout] → [Payment: Credit Card] → [Order Confirmation]

Pain point addressed: Priya needs the dress by Friday. The pincode checker on the product page ensures she knows the exact delivery timing before she commits to the checkout process.

9. SITEMAP

10. KEY FUNCTIONALITIES

Feature	Description	Customer benefit	Business benefit
Smart search suggestions	Auto-suggests categories and corrects typos.	Finds items faster without exact spelling.	Increases conversion for high-intent users.
Filters & Sorting	Narrow down by size, color, price, material, etc.	Prevents scrolling through irrelevant products.	Keeps users engaged on the site longer.
Size guide	Detailed charts with measurement instructions.	Reduces anxiety about fit.	Lowers expensive return rates.
Fabric/material information	Explicit call-out of material composition.	Sets correct expectations on feel and care.	Aligns with brand value; builds trust.
Customer images/reviews	Allowing photo uploads in product reviews.	See how clothes look on real people.	Builds immense trust and social proof.
Wishlist	Save items for later without adding to cart.	Allows curation and delayed decisions.	Provides data on popular items; enables retargeting.
Coupons	Auto-apply or manual entry field in cart.	Gives a sense of getting a good deal.	Incentivizes immediate checkout.
Saved sizes	Account feature to save sizes for family members.	Speeds up future shopping trips.	Drives customer loyalty and retention.
Order tracking	Visual timeline of the shipment.	Removes anxiety post-purchase.	Reduces customer service inquiries.

11. PRODUCT PAGE STRATEGY

The proposed structure for the product page (from top to bottom) aims to answer user questions in the natural order they arise:

1. Product images
2. Product name
3. Rating/reviews (Summary)
4. Price & Discount
5. Color selection
6. Size selection
7. Size guide
8. Fabric/material highlights
9. Product details (Care, fit type)
10. Delivery/pincode checker
11. Return information
12. Add to Cart / Buy Now
13. Full Customer Reviews
14. Recommended products

Why this order is useful:

Visuals draw the user in first. Price and high-level ratings validate initial interest. Color and size are mandatory selections. The size guide and fabric details answer deeper quality questions right when the user is deciding if it will fit nicely. Delivery and returns remove final hesitations directly above the "Add to Cart" button. Post-button reviews offer social proof, and recommendations catch users who decide against the current item.

12. BROWSING, FILTERING, CART AND CHECKOUT

Browsing Flow:

Category → Product listing → Filters → Sort → Product Details

Filtering Options:

- Price
- Size
- Color
- Brand (if applicable)
- Material (Crucial for the THREADLY brand)
- Occasion
- Rating
- Discount

Cart Structure:

The cart acts as a final review screen. It clearly lists:

- Product thumbnail and name
- Selected Size and Color
- Quantity
- Price
- Coupon entry field
- Delivery estimate based on location
- Total cost (No hidden fees)

Checkout Flow:

1. Login / Guest option (Guest checkout is mandatory to avoid friction)
2. Address entry
3. Delivery method confirmation
4. Payment selection
5. Order review
6. Confirmation

Strategy Note: Keep the checkout linear and simple. Hidden fees or forced account creation at this stage are the leading causes of cart abandonment.

14. DESIGN AND STRATEGY DECISIONS

- **Why mobile-first?**

Problem: Most e-commerce traffic is on mobile, but desktop-designed sites feel cramped.

Decision: Prioritize bottom-sheet menus and thumb-friendly buttons.

Reason: Aligns with how users naturally interact with smartphones.

- **Why advanced filters?**

Problem: High product volume overwhelms users.

Decision: Include specific filters like Material and Occasion.

Reason: Speeds up product discovery for high-intent buyers.

- **Why a detailed size guide?**

Problem: Users guess sizes, causing high return rates.

Decision: Include exact garment measurements and model heights.

Reason: Reduces returns and increases buyer confidence.

- **Why fabric information?**

Problem: Online shoppers cannot touch clothes and fear cheap quality.

Decision: Make material composition highly visible.

Reason: Supports "Better Fabric" brand promise and sets correct expectations.

- **Why simple guest checkout?**

Problem: Complex checkouts lead to cart abandonment.

Decision: Offer a prominent guest checkout option.

Reason: Removes the barrier of account creation for first-time buyers.

- **Why occasion-based categories?**

Problem: Users shop for events but are forced to browse by garment type.

Decision: Curate sections like "Officewear" or "Festive."

Reason: Matches the natural mental model of how people plan their shopping.

15. HOMEPAGE STRUCTURE

The recommended homepage flows from broad appeal down to specific trust-building elements:

Header

Search

Hero banner (Highlighting a season or major promotion)

Shop by category (Icons for quick navigation)

Trending products

New arrivals

Occasion collections (e.g., Wedding Season)

Recommended products (Based on cookies/history)

Fabric/material education (A small section reinforcing the brand promise)

Customer reviews (Social proof)

Trust/returns/shipping information

Footer

Why this order is useful: It guides the user organically. The top section handles immediate navigation. The middle section offers product discovery for users browsing casually. The bottom section builds trust and educates the user right before they reach the standard footer links.

16. BRANDING

- **Brand personality:** Honest, clean, reliable, and approachable.
- **Tone of voice:** Helpful and transparent. Avoiding excessive corporate jargon or exaggerated fashion claims.
- **Color direction:** Clean white backgrounds, dark navy or charcoal text for high readability, and subtle earthy accent colors (like muted clay or olive green) to signify natural fabric quality.
- **Typography direction:** Modern, clean sans-serif (such as Inter or Roboto) to ensure maximum legibility on small screens.
- **Photography style:** Natural lighting, showcasing fabric textures clearly. Use diverse models to reflect the real Indian consumer base.
- **UI style:** Minimalist with plenty of whitespace to let the products stand out without feeling cluttered.
- **Image style:** Realistic and relatable, avoiding overly retouched or heavily filtered aesthetics.

17. MEASUREMENT AND ANALYTICS

- **Traffic:** Total unique visitors and where they come from (social, organic, paid).
- **Search usage:** Tracking what keywords users type and identifying "zero-result" searches to improve inventory.
- **Product views:** Which items get the most clicks versus the most purchases.
- **Add to cart:** The ratio of product views to cart additions.
- **Checkout:** Identifying exactly which step users abandon their purchase.
- **Purchases:** Overall sales volume.
- **Wishlist:** Items frequently saved but not bought (which could indicate a pricing issue).
- **Returns:** Tagging returned items by reason code (e.g., "Too small", "Poor quality").
- **Reviews:** Volume and average star rating of product feedback.
- **Repeat purchases:** Tracking user accounts over time to measure loyalty.

18. DEVELOPMENT ROADMAP

PHASE 1 — MVP (Minimum Viable Product)

Homepage | Categories | Search | Filters | Product pages | Cart | Checkout | Payment gateway integration | Basic Account creation | Order tracking

PHASE 2 — IMPROVEMENT

Wishlist functionality | Photo reviews | Algorithmic Recommendations | Saved sizes for family members | Basic Personalization | Detailed Fabric care guides

PHASE 3 — ADVANCED

Advanced personalization | Creator/influencer content integration | Advanced analytics dashboards | Seller tools | Responsible-product tracking information

19. RISKS AND MITIGATIONS

Risk	Why it matters	Proposed solution
Size uncertainty	Leads to high return rates and lost profit margins.	Provide highly accurate size charts and clear fit descriptions.
High product volume	Users get overwhelmed and leave the site.	Implement robust search and highly specific filtering options.
Returns complexity	Difficult returns destroy customer loyalty forever.	Build a clear, upfront return policy and a one-click automated return portal.

Risk	Why it matters	Proposed solution
Low trust	New brands struggle to convince cautious buyers to enter payment details.	Display prominent, unedited customer reviews and explicit fabric composition details.
Slow mobile experience	Causes immediate bounce rates.	Ensure optimized image loading and lightweight code architecture.
Complicated checkout	Directly causes cart abandonment.	Use linear steps, offer guest checkout, and state shipping costs upfront.
Poor product information	Users hesitate if they don't know exactly what they are buying.	Standardize product descriptions, always highlighting material and care instructions.

20. CONCLUSION

This blueprint establishes a practical, user-focused foundation for the THREADLY e-commerce platform. It serves the modern Indian online shopper by directly addressing common friction points—such as size uncertainty, hidden fabric details, and checkout abandonment.

The strategy is useful because it prioritizes a mobile-first design, transparent product information, and a seamless user journey, aiming to build long-term trust rather than just securing one-off sales. This blueprint will act as a guiding document to ensure future UI design and development phases remain perfectly aligned with both the business objectives and genuine user needs.
